How to start a passenger transportation business Jan 21 2020
This ebook will help you start your passenger transportation business. After 11 years of operating vans and buses and recruiting and hiring commercial drivers, all the information has been compiled and shared in this book. You will find first-hand experience, valuable templates, Sample use, and website links. Additionally, you will find information on USDOT regulations, Insurance. Maintenance and helpful tools to effectively run your business.

Contributions to Passenger and Commercial Hybrid Electric Vehicle Energy Management Control Dec 20 2019 Passenger and commercial vehicle powertrain electrification are both a technical and a marketing challenge. A common hurdle experienced by the industry and the consumer is limited driving range and a relatively high cost of purchase. Hybrid electric vehicles present a promising solution to meet the ever so stringent fuel economy or energy consumption requirements, as well as comparable driving range to the conventional gasoline vehicles. Though, a challenge with hybrid electric vehicles is the efficient utilization of the available energy to reduce emissions and pitch it as a cost-effective solution. An experimental research vehicle based on the 2016 Chevrolet Camaro platform is re-built as a Plug-in Series Hybrid Electric or Extended Range Electric Vehicle. In this dissertation, mathematical modeling and optimization methods are used to develop a power loss model of this experimental research vehicle. The model is able to estimate vehicle energy consumption within a coefficient of variation of 1.9%-7.0%. The model serves as a foundation for the development of a novel energy management optimal control algorithm termed as Distance Constrained - Adaptive Real Time Dynamic Programming (DC-ARTDP). Evaluation of the algorithm over different drive conditions shows an improvement of 9.8% in the overall energy consumption of the vehicle while meeting required driving range. The algorithm is also able to provide an optimal energy consumption trajectory under powertrain system fault scenarios and meet the required range demand. The algorithms functionality is evaluated against a predictive energy management approach using Model Predictive Control. The novel algorithm improves overall energy consumption of the experimental research vehicle by 4.25% relative to the model predictive control approach. To understand the impact of electrified powertrain architectures in the context of commercial vehicles, a two-truck and three-truck platoon power loss modeling environment is developed. The impact of platooning on heterogeneous powertrain

architecture trucks with and without the proposed novel algorithm is evaluated. Implementation of this algorithm on a Series Parallel hybrid electric truck shows improvements of [approximately 8 [percent] for individual runs. Higher improvement is observed for the Series Parallel hybrid electric truck in a lead position comparative to tail position for two and three-truck platoons.

The Airliner Cabin Environment and the Health of Passengers and Crew Oct 30 2020 Although poor air quality is probably not the hazard that is foremost in peoples' minds as they board planes, it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. The Airliner Cabin Environment and the Health of Passengers and Crew examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.
